As life insurance products are long term liabilities, Sumitomo Life is investing primarily in yen-denominated interest-bearing assets such as long-term bonds and loans in our ALM strategy.

When interest rates reduce, value of in-force business is decreased reflecting lower expected future prospects of investment return. On the other hand, adjusted net worth is increased by unrealized gains on assets.

The sum of unrealized gains and value of in-force business represents expected future profits from in-force business.

Breakdown of the Group EEV based on this idea is as follows.

			(Billions of yen)
	March 31, 2020	September 30, 2020	Increase (Decrease)
EEV	3,584.1	4,297.5	713.3
Total net asset on the balance sheet +Retained earnings in liabilities (Note1)	1,316.6	1,350.1	33.5
Value of in-force business +Unrealized gains (losses) on Yen-denominated interest-bearing assets and others (Note2)	1,597.8	2,007.5	409.7
Unrealized gains (losses) of assets other than Yen-denominated interest-bearing assets and others (Note3)	669.7	939.8	270.1

- (Note1) The sum of the total net assets on balance sheet, the retained earnings in liabilities (after tax) of the Group, consolidation adjustment regarding Medicare Life and Symetra and deferred tax assets of Symetra is reported.
- (Note2) The sum of value of in-force business of the Group and unrealized gains (losses) on yendenominated interest-bearing assets and others (after tax) of Sumitomo Life and Medicare Life is reported. Yen-denominated interest-bearing assets and others (after tax) include yen-denominated bonds, loans and hedged foreign bonds corresponding to yen-denominated insurance, and foreign currency-denominated bonds corresponding to foreign currency-denominated insurance.
- (Note3) The sum of unrealized gains (losses) on securities and loans (after tax) (excluding yen-denominated interest-bearing assets and others), unrealized gains (losses) on estate and liabilities (after tax), unfunded retirement benefit obligations (after tax) is reported.

The value of new business (VNB) is calculated based on a market consistent method using risk neutral valuation techniques, where the expected excess return of investments over risk free rates is offset by allowing for the price that market participants require for taking on the investment risks. This is achieved by assuming the investment return for all assets will be equal to the risk free rates.

However, Japanese insurance companies actually invest in corporate bonds, foreign bonds, and equities, in addition to Japanese government bonds, and expect to achieve investment returns in excess of risk-free returns. If they achieve investment returns in excess of risk-free returns, their EEV will increase over the term of the policy.

When Sumitomo Life and Medicare Life assume excess returns on investments over riskfree rates, the Group's VNB, on the reference basis, will be as set out in the following table. In order to reflect some uncertainty of realizing the expected excess return, discount rates are assumed to be the same as the return on investments.

Please note that this reference basis differs from the risk neutral valuation which is used for EEV and VNB of Sumitomo Life and Medicare Life, respectively. Further, the VNB in following table is not the VNB which forms part of each EEV.

	(Billions of yen)
	Six months ended
	September 30,
	2020
Value of new business assuming excess return, on the reference basis (Note)	48.4

(Note) Sumitomo Life's expected investment return in FY2020 is 1.4%. Sumitomo Life assumes the excess return on investments over risk-free rates is 1.0%. Medicare Life's expected investment return in FY2020 is 0.9%. Medicare Life assumes the excess return on investments over risk-free rates is 0.3%.
